SUMMARY

Fourth-year Information Technology student seeking a Full Stack Developer internship. Experience building end-to-end web applications with RESTful APIs, relational databases, and authentication on the backend and React with TypeScript on the frontend. Eager to learn how production systems are built and operated, including system design, testing, CI/CD, and cloud deployment, while contributing to a real engineering team.

TECHNICAL SKILLS

Languages	Java, Python, JavaScript, TypeScript, Dart
Backend & Databases	NestJS, Prisma (ORM), Node.js, Express, Spring Boot, Socket.IO, PostgreSQL, MySQL
Frontend & Mobile	React, Zustand, Tailwind CSS, Vite, Flutter
Cloud & Tools	SonarQube, Docker, Kubernetes, Git, Swagger, Postman

EDUCATION

Mathematics – English

Triamudomsuksa Pattanakarn Nonthaburi

2017 – 2023

Bachelor of Science Program in Information Technology

(4th year) Kasetsart University, Kamphaeng Saen Campus

2023 - 2027 | GPA: 3.54

PROJECTS

Restaurant Management System (POS) | React / TypeScript / NestJS / Prisma / PostgreSQL / Socket.IO / Docker

- Built a RESTful API (~67 endpoints) for a restaurant POS covering menu, table sessions with QR-code ordering, orders, payments with split bill and void, expenses, and sales reports.
- Built the React and TypeScript frontend (Tailwind CSS, TanStack Query, Zustand) with customer, staff, and owner interfaces: QR-code self-ordering, bill management with PromptPay QR, and a sales dashboard.
- Implemented JWT authentication with role-based access control (Admin / Staff / Kitchen) and real-time order updates to kitchen and staff screens via Socket.IO.
- Designed the PostgreSQL schema with Prisma (15 models, 19 migrations), containerized with Docker Compose, and applied rate limiting, Helmet, input validation, and SonarQube code analysis.

User Authentication & Management API | Node.js / Express / MySQL / Jest / Docker

- Built authentication endpoints (register, login, refresh, logout) using JWT access/refresh tokens, bcrypt password hashing, and token blacklisting.
- Implemented role-based and owner-only authorization, user search with filtering, sorting, and pagination, plus request validation and centralized error handling.
- Wrote unit tests with Jest using mocked dependencies, documented the API with Swagger, and ran MySQL via Docker Compose with migration and seed scripts.

Flight Booking App | Flutter / Dart / Firebase Auth / Cloud Firestore

- Built a Flutter app that searches live flights by airport using the AviationStack REST API.
- Implemented sign-up and sign-in with Firebase Authentication, and stored bookings in Cloud Firestore with a real-time My Bookings list, booking cancellation, and QR-code e-tickets.
